Please amend the following paragraphs of the specification in the
manner indicated:

[0052] In summary, exec rules remove the need to modify
existing programs or use trusted gateways, by directly
specifying the security attributes of a process after
calling another program. Exemplary apparatus suitable for
carrying out the process of FIG. 3 may comprise may include
filtering means for filtering a set of capabilities of a
logically protected computing environment and modifying
only one or more of those capabilities, as selected by the
filtering means. Monitoring ~~mean s~~ <u>means</u> may be provided
for monitoring operations performed by the system which
modify names of files making up services or programs to
which an execution control rule applies.
